I'm a **Full Stack Developer** with a background in petrochemical engineering education and design. My favorite part of coding is designing a mobile application or web application, and I have a keen eye for UI/UX design. The most exciting moment for me is debugging and squashing bugs, especially when I can use my mathematic and algorithms background that I learned in university.

Top Skills

HTML5, CSS, JavaScript(ES6), Python, Node, Typescript, Front-end (React, React Native), Material-UI, Bootstrap, Back-end (Django, Express), Database (SQL, PostgreSQL, MongoDB), Git (GitHub, GitLab), Docker, Photoshop, Lightroom

Work Experience

General Assembly , Remote
Software Engineering

(05/2021)–(08/2021)

Learning programming and computer science fundamentals, and creating full stack applications.

Feature Projects:

Denj- This is a full stack mobile application that I created with React Native, Django, PostgreSQL. This application is about cozy places that users have been and they want to share with other people.

Agora- This is the full stack application that we created as a group and collaborate in the writing of frontend with React, and backend with MongoDB, and using PostgreSQL for our database . This is an online application for discussions on a forum based on topics and descriptions. Each forum has their own and is fully functional.

Dota 2 Heroes- My App is called Dota 2 Heroes. It's an app that shows the all Dota 2 Heroes and if you click on hero it gives you the detail and attributes of that hero. I made the frontend with react and third party API and it has the responsive UX design.

Dota 2_Simon- This is a Simon game which I created with JavaScript, HTML, CSS and players

must repeat random sequences of by clicking the buttons in correct order. The differences between this game and the other Simon games are that I used the Dota 2 character's images and sounds to make it more interesting and it has the responsive design, and at the end I deployed on AWS.

Uber, Atlanta
Driver

(04/2017)–(04/2021)

Provided excellent customer service to patrons Interacted with riders.

Yerce Kosk, Turkey
Photo Editor & Designer

(06/2014)–(01/2017)

Photography company specializing in wedding photos and albums.
Designed and created wedding albums for customers.

Education

Bachelor of Science in Petrochemical Engineering | Marvdasht Azad University, Iran |
(10/2008_06/2013)

Software Engineer Immersive | General Assembly, Remote | (05/2021_08/2021)
