Marvdasht Azad University
Petrochemical Engineer, 2013

Languages

English

Persian

Turkish

Experience

General Assembly

Software Engineer | Remote   05/2021 to 08/2021

- Learning programming and computer science fundamentals, and creating full stack applications.
- *Feature Projects:*

*Denj-*This is a full stack mobile application that I created with React Native. This application is about cozy places that users have been and they want to share with other people.
*Agora-*This is the full stack application that we created as a group. This is an online application for discussions on a forum based on topics and descriptions. Each forum has their own and is fully functional.
*Dota2 Heroes-*My App is called Dota2 Heroes. It's an app that shows the all Dota2 Heroes and if you click on hero it gives you the detail and attributes of that hero.
*Dota2_Simon-*This is a Simon game which players must repeat random sequences of by clicking the buttons in correct order. The differences between this game and the other Simon games are that I used the Dota 2 character's images and sounds to make it more interesting.
